The crew consists of three extraordinary beings.

Elena turned her powers to the locked doors.

The crew consists of three extraordinary beings.

So, why not remind and see Zabor's story?

The little town of Accardi-by-the-Sea was deep in peaceful slumber...

Radnor was defeated. At last Frobit had the chance to prove himself worthy of Althea's admiration.

Egret Castle, once the proud home of King Duncanthrax...

The pleasant countryside made Burthark forget his cares. If only every day could be like this!

Quester's Log

- “What was really cool about these was that the player was able to make their way through the (fairly basic) tale from the unique perspective of each character before reaching the story's climax, which allowed us to see the characters motivations, fears, triumphs and so forth in a way we would not have been able to otherwise.”

Run For Your Lives! It's FOOBLITZKY A Unique Graphics Strategy Game

Infocom? Graphics?

No, hell hasn't frozen over. Pigs haven't sprouted wings. But Infocom is announcing its first non-interactive fiction game — and it *does* have graphics.

"It's a hoax," you're thinking. "Infocom would never use graphics to illustrate locations in text adventures. Infocom hates graphics." Well, yes and no.

Infocom has yet to see computer graphics that add to the quality of a text adventure. There may be ways in which graphics could be used more subtly to enhance your mental imagery. But with today's machine resolutions, and even with proposed advancements in technology, graphics can't begin to compete with the scenes and characters you can imagine. Therefore, Infocom still firmly believes that words paint the most vivid images in your mind.

Of course, there *is* a place for graphics today: in a completely different setting and in a completely different kind of game. In fact, *Fooblitzky* is *all* graphics, and has more graphics in it than any other computer game on the market.

But the really important thing

about any game is how much fun it is, how enjoyable it is to play, not whether it does or doesn't have graphics. And *Fooblitzky* is a winner. Already, there are addicts at Infocom.

Logic, deduction, chance, and social interaction are all big parts of *Fooblitzky* — just like deductive reasoning is a part of *Chin*® and *Mysteryland*®. (*Fooblitzky* reminds some people of a cross between those games, even though its theme is completely different.) *Fooblitzky* is a multiplayer game — 2, 3, or 4 people can play. The name "Fooblitzky" was chosen because it's easy to remember and incredibly difficult to pronounce.

Okay, so the name is goofy. The game is goofy. But it's sophisticated goofiness.

The roots of *Fooblitzky* go back more than 2 years. Marc Blank and Michael Berlyn wanted to develop something unique, something totally different from text adventures — or any other kind of computer game. They hired a crazed crackerjack artist, Brian Cody, and a programming

A Mind Forever Voyaging, the first advanced-level Science Fiction story from Infocom, is for true text-adventure buffs. Why? Because it has more locations to visit (several hundred), more things to do, more responses, and a large vocabulary (1800+ words) than any of our previously released products.

The story takes place in 21st-century Rockvil, South Dakota. The United States of North America has fallen prey to incredibly high unemployment and crime rates. Political indifference, perhaps caused by backward educational systems or diminishing national resources, has swept the nation. Exploiting this opportunity, Senator Richard Ryder has developed (sic) the Plan for a Renewed National Purpose, stressing patriotism and a return to American values as they were at the country's peak, the 1950s. The public, desperate for a change, embraces the Plan, but many high government officials are unsure whether it will succeed. That is where you come into the picture.

You are PRISM (Porlock-Randi Introductory Soliptic Machine); the first intelligent, self-aware computer. You have been created to enter a simulation of Rockvil, years in the future, and return with recordings of what life would be like if the Plan

were to be introduced. While you're busy exploring the future, the scientists and programmers who created you are honing and perfecting the simulation's parameters. Thus, as the story progresses, you can travel further and further in time, watching Rockvil prosper as the Plan succeeds, or perish as it fails. Only you can tell on what course the country sets itself by adopting the Plan.

While there are several puzzles to keep players on their toes, designer Steve Meretzky (author of *Planetfall* and *Sorcerer*, and co-author of *The Hitchhiker's Guide to the Galaxy*) concentrated more on immersing the player in a vast, highly detailed, realistic world; a vision of the destiny of mankind. *A Mind Forever Voyaging* represents Infocom's greatest step yet away from games, and toward true fiction: a serious, often chilling, look at the future of the human race, reminiscent of such great works of science fiction as *1984* or *Brave New World*.

What makes an epic game like this possible? Interactive fiction "plus", the latest development system from Infocom, designed to complement our currently-used "classic" system.

Wishbringer Event

This time it was not a mansion but a museum, there were no murders, no clues, not a puzzle to be solved. Not unless you found it a puzzling experience to have a good time. The event was the Wishbringer announcement, and a good time was had by all.

This party was held in the Field Museum of Natural History in Chicago. And it was no coincidence that Summer CES was in Chicago as well. The press, distributors, and many of our own Infocom employees (including Wishbringer implementor "Professor" Brian Moriarty) attended an evening of music, dancing, and the 3 p's: presentation, prizes, and

pastries. Over 300 people joined us to celebrate the release of our 16th title.

Those who attended were treated to speeches from our Marc "Mark" Blank, Jon "Buckingham" Palace, Mike "Max the Knife" (Stan) Dornbrook, and even the professor himself. The presentation drew a standing-room-only crowd (thanks to Mix, who was seen before the party removing the auditorium's 200 folding chairs!).

The party was more than anyone could have wished for, especially if you were one of the seven lucky prize winners. Infocom drew names from a crystal punch bowl to award

FOOBLITZKY™

Fooblitzky is a unique graphics strategy game for 2 to 4 players. It's a dog-eat-dog world, as you rove the crowded streets and busy shops of *Fooblitzky*, trying to deduce and obtain the four objects needed to win the game. Victory depends on how well you use funds, keep records and outsmart your opponents. (Requires 128K, IBM version requires Graphics Card with Composite Monitor recommended.)

little luck. The clouds, dark and heavy, began to rain down upon us. "Look!" said Bergon, pointing at the chain lightning off to the north. Seconds later, the earth shook with the roar of thunder. "It is not far now," he added, as his eyes drifted to the blackening sky.

Runoff from the nearby hills was forming into numerous streams, each coursing into the main channel in which we searched in vain for gold. Crash! A tree nearby cracked in two by a stroke of lightning. Rain was falling now in buckets, and Bergon screamed for us to take cover. As I turned upstream, a great torrent of water was heading right at me!

Cornerstone

- “A sophisticated database manager for non-programmers”

Cornerstone: "The Hottest New Business Product of 1985"

On November 1st, at a press conference in New York City, Infocom announced Cornerstone™, the first in a new line of interactive business software.

Cornerstone is a full-featured relational database management system. Data management programs have traditionally fallen into two distinct camps: simple-to-use programs with very limited capabilities, and full-featured programs that require the user to have programming skills (or to hire a consultant who does). Cornerstone was designed to put all the power of this second group into the hands of non-programmers.

With Cornerstone you can design, build, and use sophisticated data management applications without writing a single line of code. These applications could be almost anything — a personnel system, a client-tracking system, or a roster of

games.

Cornerstone also simplifies data entry. Whenever you've entered sufficient characters for Cornerstone to know what you want, it will complete the rest. Cornerstone will also check that your input meets specified constraints (such as minimum or maximum values). And at any point, you can press the OPTIONS key to see a list of all allowable data values. (A lexicographer in a cage?)

Why Business Products? See page 6

The other mainstay of Cornerstone is flexibility. You're never locked into one way of doing things. If you need to look at your information in a new way, you can create a new report in seconds (with no limit to the number of reports). If you need to add a third phone number for

In developing Cornerstone, we've tried at every step to anticipate what a sane (or insane) person might attempt to do next. There's a critical difference, however, between Cornerstone and the games. While the games strive to make life difficult — constantly thwarting your best efforts, posing enigmas, even leaving you dead in some remote wasteland — in Cornerstone, we've done everything we can think of to make things *easy*. You'll never need InvisiClues to use Cornerstone, because we've given it a HELP key

Review Board

If you play any computer games or know someone who does, you have no doubt heard of Infocom, a company that has made its mark producing adventure-style games for various personal computers. Now, Infocom has decided to shed its party hat for a blue suit with its first business product, a database called Cornerstone, which has some intriguing features. But it also has

You can easily define or later change the structure of your database, a difficulty with some other programs. A few shortcuts make entering data easier, too. You can enter "yesterday" or "last month" in a date field, for instance, and Cornerstone will compute the entry. If you've specified an entry to be limited to certain values — for example, a client's name must be in the client file — then Cornerstone will fill in the name as soon as you've typed enough letters to identify it uniquely.
